

APPLICATION CONTAINERIZATION

Containers, while not new, are gaining popularity as IT organizations focus on optimizing their applications, both legacy and traditional, to achieve portability, leverage the cloud, de-risk and reduce licensing and administration costs.

The *Application Containerization Proof-of-Value QuickStart* provides expert assistance in containerizing up to 3 applications, without modification, then deploying them on a container platform, covered within the scope of the engagement. This offering helps customers to start their container journey at a limited scope and fixed, 30-day duration, while demonstrating proof of value. We understand the journey and how to get you there.

All engagements, following the methodology below, begin with a kick-off meeting and a close-off meeting upon completion. A proof of value report and recommendations are presented as part of the deliverables.

ABOUT HIGHVAIL

Since 2003, we approach innovation as an ongoing, sustainable and strategic commitment that drives industry leadership through exceptional customer experiences. At HighVail, our relentless focus on enabling IT advancement and the cumulative benefits that progress delivers is what drives us. Enhanced organizational agility and accelerated time to value are two results that provide measurable returns on your investments. 100% customer satisfaction is our commitment to you.
