

WHY CONTAINERIZE BANNER?

Containers, while not new, are gaining popularity as education institutions focus on optimizing their Banner applications to **streamline the deployment process**, **enhance security**, **reduce complex management and maintenance activities** and **ensure application availability while reducing costs**.

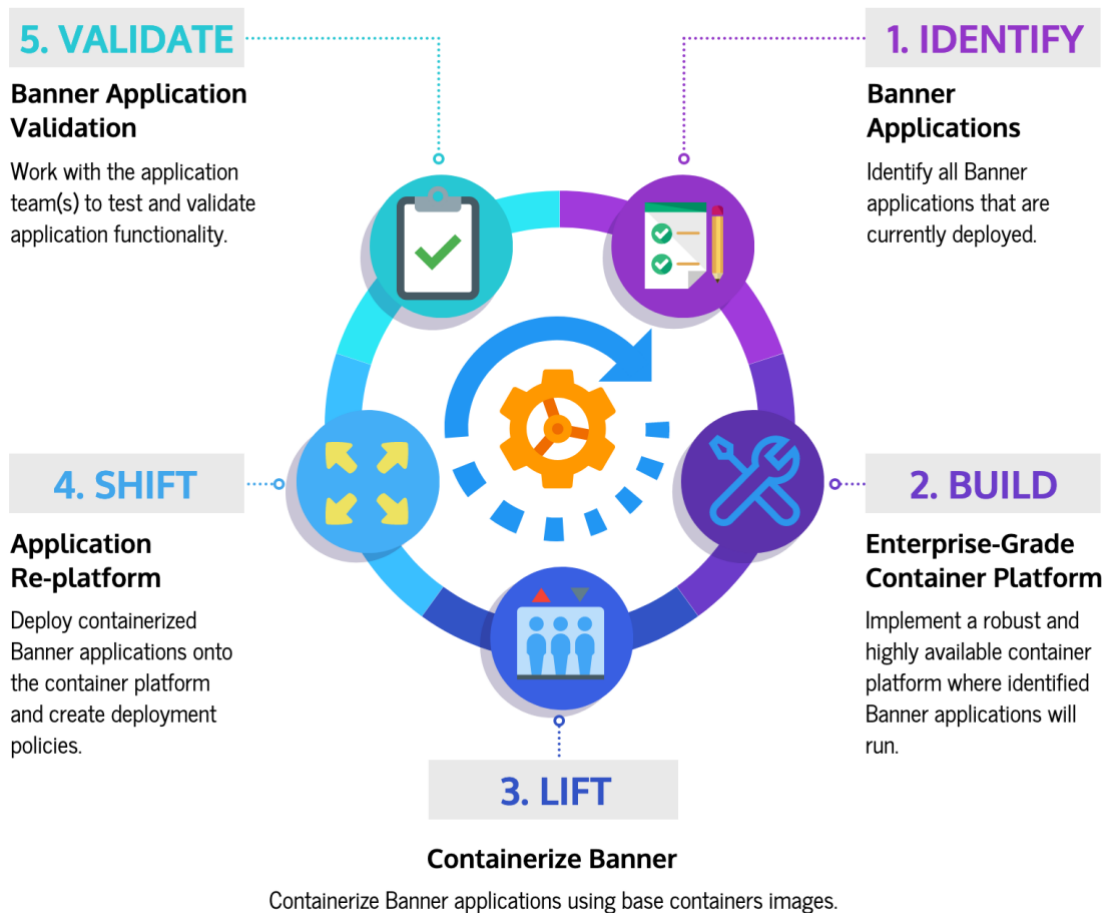

WHAT IT MEANS FOR INSTITUTIONS

The *Banner Containerization* offering provides expert assistance in **containerizing Tomcat instances** that are running Banner applications, **without modification** and then deploying them on an **enterprise-grade** container platform. This helps institutions solve reoccurring challenges such as:

- ✓ Managing, maintaining and deploying Banner across environments.
- ✓ Easy rollback in-case of failures.
- ✓ Faster upgrades that save cost and time.

We understand the complex issues associated with running Banner on-premise and are helping institutions overcome the friction that can directly impact **speed to delivery**.

*All engagements follow the methodology below and include project management, beginning with a kick-off meeting, regular touchpoints, and a close-off meeting upon completion.

ABOUT HIGHVAIL

Since 2003, we approach innovation as an ongoing, sustainable and strategic commitment that drives industry leadership through exceptional customer experiences. At HighVail, our relentless focus on enabling IT advancement and the cumulative benefits that progress delivers is what drives us. Enhanced organizational agility and accelerated time to value are two results that provide measurable returns on your investments. 100% customer satisfaction is our commitment to you.
