# ANSIBLE AUTOMATION PROOF-OF-VALUE QUICKSTART

### What is Automation?

Automation is enabling modern problem solving, accelerating visibility to real-time operations and the ability to effectively address inefficiencies associated with error prone human processes. Automation software works within the limits of playbook instructions, tools, and frameworks to carry out the tasks with little to no human intervention.

Imagine that all of your IT processes are automated using a single tool that everyone in your IT teams can use. If it could automate your entire application life cycle across servers, clouds, containers, and everything in between, what would you have time to do? The possibilities are endless.
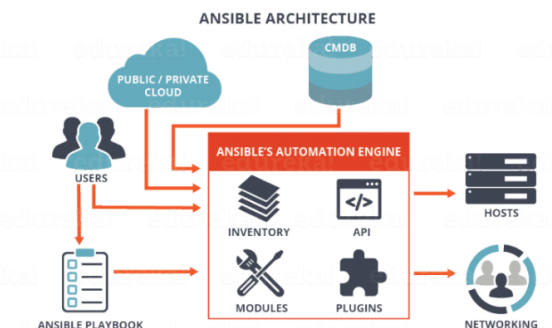

Our **Ansible Automation Proof-of-Value QuickStart** provides clients with an easy entry to a proven automation practice (for the end-to-end orchestrated hybrid data center). The offering includes expert assistance training your team, deploying the platform as a proof-of-concept (POC) targeted to automate and deploy an initial workflow or processes.

Ansible is not only cross-platform, it works with anything, so why limit yourself?

### Accelerate Your Success with The Red Hat Ansible Automation Platform

How do we go from manual configuration processes to mass automation adoption and create a modern IT driven organization in the process? The answer is with Ansible.

IT automation isn't your day job. You're focused on maintaining your competitive advantage and to do so you need an easy, maintainable solution for configuration management, deployment, and provisioning, but just don't have the time to get started with automation.

# What is included in the Ansible Automation POV QuickStart?

## DISCOVER

Based on your goals, we work with you to determine an appropriate automation solution and workflow.

## DEPLOY

We'll help you install the Ansible software in your environment and provide expert advice on how to configure for optimum performance and ease of use.

## ENABLE

We believe in learning by doing; training will be staged in 4 separate sessions throughout the engagement.

## REPORT

The final deliverable is a Proof-of-Value report that documents the value and the viability of the solution and it's potential benefits at scale.

REMOTE COMMAND EXECUTION

REST API & TOWER CLI TOOL

MANAGE & TRACK ENTIRE INVENTORY

SELF-SERVICE

SCHEDULE ANSIBLE JOBS

INTEGRATED NOTIFICATIONS

WHO RAN WHAT JOB WHEN

SCALE CAPACITY WITH CLUSTERS

MULTI-PLAYBOOK WORKFLOWS

ANSIBLE DASHBOARD

REAL-TIME JOB STATUS UPDATES

## Why HighVail?

Automation is key to a successful IT modernization strategy as it allows for faster scaling and a more efficient workload. Automating repetitive tasks allows teams to be more productive, with significantly less time wasted on menial duties. Freeing up time provides your team the ability to improve collaboration and innovation; strategies that actually drive the business forward toward new levels of growth.

The **Ansible Automation Proof-of-Value QuickStart** was driven by customer feedback and provides battle tested benefits to businesses including less time to revenue, reduced costs, and greatly improved productivity and efficiency to optimize potential to remain agile in today's competitive marketplace.
